Purpose of Web Application

This simple web application is meant to help novices learn how HTML and other web elements work together to create interactive websites. Users can add, finish, or remove tasks from its To-Do list, and everything is saved locally in the browser using local Storage. A sample contact form is also included so you can get experience managing user input. This app aims to create a useful and user-friendly tool while providing students with a practical beginning point for investigating web development.
